Herschel's Weather Table for Foretelling the Weather, through all the Lunations of each Year, Forever.

This table and the accompanying remarks are the result of many years' actual observation, the whole being constructed on a due consideration of the attraction of the sun and moon, in their several positions respecting the earth, and will by simple inspection, show the observer what kind of weather will most probably follow the entrance of the moon into any of its quarters, and that so near the truth, as to be seldom or never found to fail.

10 and midnight.....	Fair.....	Fair and frosty.

Observations.—1. The nearer the time of the moon's change first quarter, full and last quarter, are to *midnight*, the fairer will the weather be during the seven days following.

2. The space for this calculation occupies from ten at night till two next morning.

3. The nearer to *midday* or *noon*, the phases of the moon happens, the more foul or wet weather may be expected during the next seven days.

4. The space for this calculation occupies from ten in the forenoon to two in the afternoon. These observations refer principally to the summer, though they affect spring and autumn nearly in the same ratio.

5. The moon's change, first quarter, full and last quarter, happening during six of the afternoon hours, *i. e.*, from four to ten, may be followed by fair weather; but this is mostly dependent on the *wind*, as is noted in the table.

6. Though the weather, from a variety of irregular causes, is more uncertain in the latter part of autumn, the whole of winter, and the beginning of spring, yet in the main, the above observations will apply to those periods also.

7. To prognosticate correctly, especially in those cases where the *wind* is concerned, the observer should be within sight of a good *vane*, when the four cardinal points of the heavens are correctly placed.

February.—Important at this season to collect plenty of manure: prepare dung and other heating materials for hot-beds: for which select a situation well protected by a close fence or wall. When all is prepared, begin to sow Cabbage, Egg-plant, Lettuce, Cucumber and Tomato seed: plant Kidney Beans, Potatoes, Peas; sow Radish seed. In cold beds, well protected, plant Broad Beans, sow Cabbage seed.

Honesty is the best policy, but he who acts upon this as his rule, will not be an honest man.

Trust not the world, for it never payeth that it promiseth.

November.—Endeavor to avoid having your garden products frozen fast in the ground; begin in good earnest to secure them. Cabbage may be taken up and laid in rows against a ridge, so as to form a square, compact, close-growing bed, the roots and stems being buried up to the lower leaves in Cabbages. The beds may then be covered with straw, or a temporary shed erected over them.

The pleasantest things in the world are pleasant thoughts, and the greatest art in life is to have as many of them as possible.
